

COMMERCIAL MISTING FAN

Description:

The Commercial Misting Fan is a compact, very quiet and efficient fan that cools an area via a fine mist sprayed over its intended area. The Commercial Misting Fan features centrifugal atomisation design, which, avoids the need for filters to prevent nozzles from clogging. The Commercial Misting Fan allows the user to adjust the mist volume, giving the option for the fan to be used as a normal fan. The Industrial Misting Fan comes with a 3-speed impact motor and 90° oscillation, ensuring the fan has a large square meter influence. The Commercial Misting Fan is available in a pedestal model which is highly portable and comes on a cart with brakes located on the wheels for added safety. The Pedestal model comes with over 6 hours of mist in its 24L tank in the 500mm model and 32L and 4 hours of mist in the 650mm model. The Commercial Misting fan is a safe alternative to misting rings, water cannot spray without the fan motor (protecting the motor from potential water contamination).

Features:

- ⊕ Adjustable mist volume
- ⊕ 3-speed impact motor
- ⊕ 90° oscillation
- ⊕ Portable with wheels
- ⊕ Very quiet operation
- ⊕ Centrifugal atomisation design, which, avoids the need for filters to prevent nozzles from clogging

Specifications:

Model #	Diameter	Motor	Air Flow	Weight
IMF450	450mm	130W	1910L/s	14kg
