

VAL 6 Series Infrared Heater

NEW PRODUCT

Description:

SUN LIGHT WARMTH

VAL6's radiant heat penetrates evenly on surface and inside like the sun light.

BEST CHOICE FOR OUTDOORS

VAL6's performance is unique in the outdoors and unlike forced air heaters, which lose heat from wind and cold air.

HEAT TRANSFER

The infrared rays transfer straight and directly to the object.

NO AIR, DUST FREE

VAL6 only sends the heat forward. Dust free and clean.

ODORLESS

With the automatic air release valve, VAL6 doesn't produce odor nor smoke when switching on and off, and radiates only the heat forward. The exhaust gas goes upward.

ENERGY SAVING

The fuel is mist sprayed and burned 100%.

PORTABLE

VAL6 is portable with wheels (excepting Daystar).

SAFETY

Equipped with standard safety devices including flame monitor, also with safety guard.

EASY AND SPEEDY

VAL6 can start up or shut off in seconds and reaches the peak of efficiency in couple of minutes.

These operating characteristics provide complete flexibility and are keys to energy efficiency and conservation in application not needing continuous heat application.

DAYSTAR

KBE1S

EPX

The Range comprises of 3 Models

DAYSTAR	Personal heater which adopts dual heating system of radiant and convection heat. Perfect for personal heating applications.
KBE1S	Portable heater which offers high efficiency and low fuel consumption in a portable heater.
EPX	With a 20% larger combustion chamber disk then the KBE1S and improved atomization, coexistence of power and economy is now possible with the EPX.

Model #	Description	Output
DAYSTAR	VAL6 Daystar Diesel Heater	15kW
KBE1S	VAL6 KBE1S Diesel Heater	32.5kW
EPX	VAL6 EPX Diesel Heater	High 40.7kW Low 29.1 kW
