

HALOGEN INFRARED RADIANT HEATER

The Fanmaster HIH2000 is a powerful infrared heater that generates 2000 watts of radiant heat. This means that it can warm both objects and people directly, without the need to heat the air first. This makes it an ideal heater for outdoor use, as it can provide instant warmth on chilly evenings.

The Fanmaster HIH2000 is made of a high-quality, long-lasting stainless steel housing. This makes it both durable and rust-resistant. The heater also has an adjustable bracket that allows you to change the angle at which the heat is directed. This means that you can direct the heat where you need it most, whether it's on your patio, deck, or even in your garage.

In addition to being powerful and durable, the Fanmaster HIH2000 is also safe and environmentally friendly. It does not burn oxygen or reduce air moisture, so you can use it with confidence knowing that it is not harmful to your health or the environment.

Please note that infrared spread may be reduced by 1/3 to 1/2 in exposed regions with air movement and wind. In certain locations, we propose increasing the number of heaters accordingly.
